

## Nu Flow re-lines at De Waterkant Piazza Body Corporate

**Location:** De Waterkant Piazza, De Waterkant, Western Cape

**Situation:**

Nu Flow were called to site to investi-gate a PVC sewerage pipe that had been join onto a cast iron stack.

The fact that there is no glue that can bond these two materials was allowing the water to seep into the stack.

Traditional pipe replacement would mean that the garage of the building would need to be chopped open in order to access the affected area. Its no wonder the client opted for Nu Flow pipe re-lining instead!

**Solution:**

Nu Flow re-lined the space between these two pipe with Nu Flow's pull-in-place structural lining system creating a smooth free flowing pipe.

The re-lining was done working from existing access points thereby causing no damage or distruction to the building.

The end result is a new pipe within the old pipe. NO mess, NO chopping open, NO damage to structures!

**Are you concerned about elbows & tees in pipes?**

Nu Flow re-lining process can effortlessly get around 90 degree bends!

From 15mm - 300mm

AC / Copper / PVC/HDPE / Earthenware / Galvanized

Before re-lining
